"M Seruh notes

David,

Is it possible search

1. (X, 18-30 aa)-SEQ ID NO:2-(X, 14 aa)-SEQ ID NO:3-(X, 32 aa)-SEQ ID NO:4-(X, 11 aa) string and

2. (X, 23aa)-SEQ ID NO:5-(X, 15 aa)-SEQ ID NO:6-(X, 32 aa)-SEQ ID NO:7-(X, 10 aa)?

All the SEQ ID NO are small peptides.

Please compare SEQ ID NO:50, 52, 54, 109, 107, 129, 131, 127 against each other. I would like to know what is the differenenes in the seqs. They are all 218 aa antibody light chain.

Please compare SEQ ID NO:89, 117, 143, 145, 147, 155 against each other.

Please search SEQ ID 129, 131, 127, 143, 145, 147, 157. They are all amino acid sequences either 218 or 451 aa.

Please search SEQ ID NO:1 (10aa)

Do I have to get approval from someone for these many seq searches?

Examiner Misook Yu, Ph.D. 703-308-2454 (Phone) Art Unit 1642 CM1-8E18 (Room) CM1-8E12 (Mail Box)

Tar Expression of apoptosis-associated genes in hibernating and stunned
myocardium of pig.";
Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.

LIENTION: RECEPTOR FOR A CYTOKINE LICAND KNOWN AS FASL. THE
ADAPTOR MOLECULE FADD RECRUITS CASPASE-8 TO THE ACTIVATED
CRICALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTECLYTIC
ACTIVATION. RESULTING AGGREGATE CALLED THE DEATH-INDUCING
SIGNALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTECLYTIC
CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTECASES) MEDIATING
APOPTOSIS. FAS-MEDIATED APOPTOSIS MAY HAVE A ROLE IN THE
INDUCTION OF PERLIPHERAL TOLERANCE, IN THE BANTICHN-STIMULATED
SUICIDE OF MATURE T-CELLS, OR BOTH (BY SIMILARITY).

LISUBGELLULAR LOCATION: Type I membrane protein.

LOWARIN: CONTAINS A DEATH DOMAIN INVOLVED IN THE BINDING OF FADD,
CHARLING CONTAINS 3 THRR-CYS REPEARS.
                                                                                                                                                                                                                                                 Gaps

Tumor necrosis factor receptor superfamily member 4 precursor (OX40L
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
factor kappaB-pathway and can bind the cytoplasmic adapter molecule FADD/WORTI which engages initiator caspases such as caspase 8 leading to subsequent activation of effector caspases that execute apoptotic death of the cell.
SUBUNIT: can interact with TRADD and RIP.
SUBCELLULAR LOCARION: Type I membrane protein.
TISSUE SPECIFICITY: Widely expressed. High levels are found in spleen, peripheral blood leukocytes, small intestine and thymus, but also in K562 erythroleukemia cells, MCF7 breast carcinoma cells and activated T-cells.
                                                                                                                                                                                                                                                                                                                 PROSITE; PS5001; DENTH-DOMAIN; 1.

US-09-180-100-15

Sequence 15, Application US/09180100

Patent No. 6306395

GENERAL INPORMATION:
APPLICANT: NARAWURA, Shigekau
TITLE OF INVENTION: NOVEL Fas ANTIGEN DERIVATIVE
FILE REFERENCE: 1110-207P

CURRENT FILING DATE: 1998-11-02

EARLIER APPLICATION NUMBER: PCT/JP97/01502

EARLIER APPLICATION NUMBER: PCT/JP97/01502

SOFTWARE: PATENTING DATE: 1997-05-01

NUMBER OF SEQ ID NOS: 25

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 15

LENGTH: 157

TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GENERAL INC. 0300393)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           autoimmune disease; allergy; atopy; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; aplastic anaemia; panmyelophthisis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                 used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis, hepatitis and AIDS
                                                                                                                                                                          This peptide represents the human Fas epitope recognised by novel murine anti-human Fas monoclonal antibody HFE7A. It was identified by ELISA and competitive assays using peptides (see AAW8043-63) from the extracellular domain of Fas. The epitope is conserved HFE7A antibodies (see AAW83031-37) produced by CDR grafting. These antibodies bind to the Fas epitope. They are capable of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. They are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas autoimmune disease (systemic lupus erythematosus, Hashimoto's animal models.
                                                                                       New antibodies and proteins bind conserved epitope of Fas antigen
                                                                                                                                                                                                                                                                                                                                disease, graft versus host disease, Siogrem syndrome, permittions anaemia, Addison's disease, scleroderma, Goodpasture syndrome, crohn's disease, rheumatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia gravis, multiphe sclerosis, Basedow's disease, thrombopenia purpura and insulin-dependent diabetes), allergies, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA, or a humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFETA. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allergy, atopy, arteriosclerosis, myocarditis, cardiomyopathy. Glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS and organ graft rejection. Sequences AAB14740 and AAB14751-B14771
                                                                                                                                                 Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains anti-Fas antibody \,\cdot\,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Internation describes a novel numarized anti-ras anticonomial Fas/Fas molecule (1) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents capperposis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-amemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, immunoadulatory, dermatological, immunosuppressive, thyromimetic, antiarteriosclerotic, cardiant and hepatropic activity. (T) induce antiarteriosclerotic, cardiant and hepatropic activity. (T) induce antiarteriosclerotic, cardiant and hepatropic activity. (T) induce composis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding. (I) are used to treat and/or prevent diseases associated with the Fas/Fas ligand system, especially systemic versus host disease, Sjorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's moultiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, and transplant rejection. (I) selectively induce it in abnormal cells but selectively induce it in abnormal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in the mative ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents a human pas extracellular domain peptide fragment described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                          New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in cells with abnormal Fas-Fas ligand systems
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                human, apoptosis; HFETA, autoimmune disease; Hashimoto's disease; systemic lupus erythematosus; graft versus host disease; systemic lupus erythematosus; graft versus host disease; slogren syndrome; pernicious anaemia; Addison's disease; scleroderma; Goodpasture syndrome; Crohn's disease; sterility; rheumatoid arthritis; autoimmune haemolytic anaemia; myasthenia gravis; multiple sclerosis; Basedow's disease; thrombopenia purpura; insulin-dependent diabetes; allergy; atopy; arteriosclerosis; myocarditis; cardiomyopathy; glomerular nephritis; hypoplastic anaemia; hepatitis; AIDS; transplant rejection; therapy.
                                                                                                                                         This invention describes a novel humanized anti-Fas antibody-like

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Fas epitope; anti-Fas antibody; murine monoclonal antibody HFE7A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Synthetic peptides P1-P15 (see AAW83043-57) are partial sequences of amino acids 1-157 of the extracellular domain of human Fas, with between 9 and 11 amino acid residues overlapping one another. P16 (see AAW83058) is a negative control having no homology with human Fas. P1-P16 were used in an ELISA, which demonstrated that novel murine anti-human Fas monoclonal antibody HFE7A specifically binds an amino acid sequence contained in P11. The epitope (see AAW83030) was subsequently identified. The invention provides humanised HFE7A antibodies (see AAW83031-37) produced by CDR grafting. These antibodies are capable of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. They are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                       New antibodies and proteins bind conserved epitope of Fas antigen - used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis, hepatitis and AIDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fas; antibody; human; anti-inflammatory; anti-anemic; antidiabetic; anti-allergic; anti-arthritic; antiviral; immunomodulatory; cardiant; dermatological; immunosuppressive; thyromimetic; antirheumatic; anti-Fas; nephrotropic; antiinfertility; neuroprotective; antiarteriosclerotic; hepatotropic; humanized; apoptosis; systemic lupus erythematosus; Hashimoto disease; rheumatoid arthritis; graft versus host disease; Sjorgen's syndrome; anemia; Addison's disease; scleroderma; sterility; Goodpasture syndrome; Crohn's disease; sterility; myasthenia gravis; multiple sclerosis; Basedow's disease; thrombopenia purpura; allergy; insulin dependent diabetes mellitus; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; hepatitis; transplant rejection.
                                                                                                                                                                                                     The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA, or a humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFETA. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allergy, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS and organ graft rejection. This invention describes a novel numarized anti-ras antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas igand system, by binding to Fas on the cell surface, and prevents cappered is in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of them invention have anti-inflammatory, anti-anemic, antidiabetic, anti-inflammatory, carti-anemic, antidiabetic, antinifertility, neuroprotective, antiviral, antiarteriosciarotic, cardiant and hepatropic activity. (I) induce antiarteriosciarotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding. (I) are used to treat and/or prevent diseases associated with the Fas/Fas ligand system, especially systemic versus host disease, Sjorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's disease, autoinmune hemolytic anemia, sterility, myssthenia gravis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral dependent diabetes mellitus, alleray, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral cells. They bind to both human and murine Fas, so can be evaluated in the native ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antigense peptide described in the house has a human anti-murine antigense peptide described in the human and merived antigenic peptide described in the house of the artively sequence represents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                 New humanized anti-Fas antibody, useful for treating or preventing e.g.' inflammatory or autoimmune disease, induces apoptosis selectively in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel humanized anti-Fas antibody-like

Fas antigen derivative containing modified extracellular region -
has low antigenicity, promotes apoptosis and is useful in treatment
of viral and other diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; Fas antigen; derivative; apoptosis regulation; gene therapy; treatment; diabetes; arthritis; lupus; hepatitis; influenza; HIV; apoptosis modulation; immunoglobulin G1 Fc; IgG1 hinge; fusion.
                                                                                                                                                                                                                                                                                                                                                                                                                                       contain a Fas antigen extracellular region lacking one or more amino acid residues in the region from the amino-terminal to (but
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The derivative is an effective regulator of apoptosis and can be used (either by administration of the polypeptide, or by the use of the coding DNA in gene therapy) to treat a range of diseases, e.g. diabetes, arthritis, lupus and in particular viral diseases such as hepatitis, influenza and HIV, by modulating apoptosis of virus-infected cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                excluding) the 1st cysteine residue (preferably at least 29

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                              transduces an apportotic signal on binding of its ligand, Fabrican an apportotic signal on binding of its ligand, Fas ligand transduces an apoptotic signal on binding of its ligand, Fas ligand (Fast). Fas autoantibodies have been isolated from the serum of healthy blood donors - these may represent an additional mode of regulation of Fas-mediated signals in vivo. The Fas peptides may be used to modulate apoptosis via blocking autoantibody binding to Fas, thereby reducing or increasing Fast binding, which results in inhibition or stimulation of apoptosis. Fp5 (AAX69514) is thus able to induce apoptosis while Fp11 (AAX69515) and Fp9 (AAX69519) are able to block apoptosis while Fp11 (AAX69515) and Fp9 (AAX69516) comprise amino acids which are important for binding of Fas to Fast. The Fas peptides can be used to obtain antibodies containing a Fas binding site. The peptides and antibodies can be used in assay methods to obtain candidate modulators of Fas-mediated apoptosis. The peptides, mixtures of peptides, nucleic acids or proliferation. The peptides, mixtures of peptides, nucleic acids or mithodies are useful for methods of treating proliferative disorders. The disorders that may be prevented or treated include tumours, cancer, postains, type I diabetes, multiple sclerosis, liver cirrhosis and HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                Fas antigen derivative containing modified extracellular region -
has low antigenicity, promotes apoptosis and is useful in treatment
of viral and other diseases
                                                                                                                                      The present sequence encodes a Fas antigen derivative/IgG1 hinge fusion, which contains a Fas antigen extracellular region lacking one or more amino acid residues in the region from the amino-terminal to (but excluding) the 1st cysteine residue (preferably at least 29 residues are deleted).

The derivative is an effective regulator of apoptosis and can be used (either by administration of the polypeptide, or by the use of the coding DNA in gene therapy) to treat a range of diseases, e.g. diabetes, arthritis, lupus and in particular viral diseases with as hepatitis, influenza and HIV, by modulating apoptosis of

The present invention relates to a method for treating conditions leading to bone loss. The method comprises administering a purified and isolated osteoprotegerin (OPG) protein (AAF57836-AAF57838 and AAB66974-AAB66976) in conjunction with other substances such as tumour necrosis factor-alpha (TNF-alpha) inhibitors, interleukin (IL)-6, -8 and -18 inhibitors, ICE modulators, fibroblast growth factor (FGP)-10 modulators and/or platelet activating factor (PRF) antagonists. The method is useful for treating conditions leading to bone loss such as rheumatoid arthritis, multiple
                                                                                                                                                                                                                                                                                                                                                                             Bone loss; osteoprotegerin; OPG; rheumatoid arthritis; hyperalgesia; multiple sclerosis; osteoporosis; osteomyelitis; asthma; inflammation; systemic lupus erythematosus; graft-versus-host disease; septic shock; acute pancreatitis; Alzheimer's disease; anorexia; atherosclerosis; pain; coronary condution; myocardial infarction; cancer; diabetes; psoriasis; endometriosis; fever; glomerulonephritis; inflammatory bowel disease; ischemnia; parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             atherosclerosis, coronary conditions (e.g. myocardial infarction), cancer, diabetes, endometriosis, fever, glomerulonephritis, hyperalgesia, inflammatory bowel disease, ischaemia, pain, Parkinson's disease, psoriasis and septic shock The present sequence was used in a sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating conditions leading to bone loss such as rheumatoid arthritis, multiple sclerosis and asthma, comprises administering an osteoprotegerin protein in conjunction with e.g. inhibitors of interleukin and tumor necrosis factor alpha -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sclerosis, osteoporosis, osteomyelitis and asthma. The method is also useful for treating inflammation, systemic lupus erythematosus (SLB) a graft-versus-host disease (GVHD). Other diseases that can be treated include acute pancreatitis. Alzheimer's disease, anorexia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         variable immunodeficiency, X-linked agammaglobulinaemia, severe combined immunodeficiency and Wiskott-Aldrich syndrome, autoimmune diseases (such as rheumatoid arthritis, allergic encephalomyelitis, multiple sclerosis, diabetes mellitus and asthma), HIV infection, epilepsy, cancer, cardiovascular diseases and other neurological diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is Fas, a member of the tumour necrosis factor receptor family. A novel human tumour necrosis factor receptor, designated TR9, has been isolated The TR9 receptor is also known as Death Domain Containing Receptor 6. TR9 polypeptides, polynucleotides or agonists are useful for treating, preventing or diagnosing common
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid molecule encoding a human tumor necrosis factor receptor, known as TR9, useful for treating, preventing and diagnosing severe combined immunodeficiency, autoimmune diseases, HIV infection, epilepsy

A natural, soluble Fas antigen variant (AAR99682), designated Fas dell, and other Fas variants (AAR99683-85) are derived by alternative splicing of Fas gene transcripts. A cDNA clone (AAT34527) coding for the variant was obtd. from human peripheral blood mononclear cells. The Fas dell variant lacks the transmembrane domain of insoluble Fas antigen (AAR99681). Recombinant dell variant, or fragments of it, can be expressed in prokaryotic or eukaryotic (e.g. COS) cells. Detection of increased levels of soluble forms of Fas antigen can be used to diagnose autoimmune diseases, esp. systemic lupus erythematosus and angioimmunoblastic lymphadenopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid encoding Fas protein without its trans-membrane region - and related vectors, transformed cells, transgenic animals, protein and antibodies, useful for control of Fas mediated apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mRNA was obtd. from human lymphocytes and PCR was used to make cDNA specific for Fas-delta-TM (i.e. Fas lacking the transmembrane region) mRNA. The PCF product was ligated into pBluescript and the recombinant plasmid was used to transfect E. coli DH5-alpha cells. The insert sequence of pBluescript-Fas-delta-TM encoded the protein

chain of murine anti-human Fast and antibody HFETA.

Chain of murine anti-human Esquence (see AAM83042) entailed making P47A, K49R, H80S, P81R, V82L, E85A, A87F and T89V amino acid substitutions; these residues are conserved in the human light chain (kappa chain). Host cell Escherichia coli pHSGHH7 SANK 73497 harbors plasmid pHSGHH7 carrying a fusion fragment of the humanised HH type HFETA light chain and DNA encoding the region of human communoglobulin kappa chain, and is deposited as FERM BP-6073 (claimed). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised versions of HFETA approxal, in abormal cells expressing Fas, and of inhibiting apoptosis in normal cells expressing Fas, and of inhibiting are used to evaluate, in animal models, treatments of diseases that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diseases, including autoimmune disease (e.g. systemic lupus erythematosus, Hashimoto's disease, graft versus host disease, Sjogren syndrome, pernicious anaemia, Addison's disease, Sjogren syndrome, pernicious anaemia, Addison's disease, recorderma, Goodpasture syndrome, Crohn's disease, theumatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura and insulin-dependent diabetes), allergies, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antibodies and proteins bind conserved epitope of Fas antigen used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis, hepatitis and AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the amino acid sequence of the HH type humanised light
                                                                                                                                                                                                                                                                                                                                                                                          Hiroko Y, Jun O, Kimihisa I;

                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
       Chain of murine and sequence to the murine in munication of the murine sequence (see AAW83042) entailed making chain of murine anti-human Fass monoclonal antibody HFE7A.

Humanisation of the murine sequence (see AAW83042) entailed making the ATA and K49R antion coid substitutions; these residues are conserved in the human light (kappa) chain. Host cell E. coli pHSGHM17 SANK 73597 harbors plasmid pHSGHM17 carrying a fusion of fragment of the humanised HM type HFE7A light chain and DNA encoding the region of human immunoglobulin Kappa chain, and is deposited as FERM BP-6072 (claimed). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised antibodies by culturing host cells. Humanised antibodies are used to evaluate, in animal cells are capable of inducing apoptosis in abnormal cells. REFA, are capable of inducing apoptosis in abnormal cells. The humanised antibodies are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune craft versus host disease, Sjogren syndrome, pernicious anaemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's disease, rheumatchia removing multimine haemolytic anaemia, continity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura and insulin-dependent diabetes), allergies, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all claimed).
This is the amino acid sequence of the HM type humanised light
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            scleroderma; Goodpasture syndrome; Crohn's disease; sterility; rheumatoid arthritis; autoimmune haemolytic anaemia; myasthenia gravis; multiple sclerosis; Basedow's disease; thrombopenia purpura; insulin-dependent diabetes; allergy; attopy; arteriosclerosis; myocarditis; cardiomyopathy; glomerular nephritis; hypoplastic anaemia; hepatitis; AIDS; transplant rejection; therapy.

This is the amino acid sequence of the MM type humanised light chain of murine anti-human Fas monoclonal antibody HFE7A. E. coli saw 73697 harbors plasmid pHSGMMC carrying a fusion fragment of the humanised wat type HFE7A light chain and DNA encoding the region of human kappa chain, and is deposited as FERM BP-6071 (claimed). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised versions of HFE7A (see AAW83031-37), clike native HFE7A, are capable of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. The humanised antibodies are used to evaluate, in cormal cells. The humanised antibodies are used to evaluate, in theractions, and also to treat such diseases, including autoimmune disease (e.g. systemic lupus erythematosus, Hashimoto's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antibodies and proteins bind conserved epitope of Fas antigen - used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis, hepatitis and AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sterility, myasthenia gravis, multiple sclerosis, Basedow's dise

chain of murine anti-human Fas monoclonal antibody HFE7A.

Humanisation of the murine sequence (see AAM83042) entailed making
D1E, P47A, K49R, H80S, P81R, V82L, E84P, A87F, T89V and R107K
amino acid substitutions; these residues are conserved in the
human light chain (kappa chain). Host cell Escherichia coli
pHSHHS SANK 7039B harbors plasmid pHSHH5 carrying a fusion
fragment of the humanised PHHH type HFE7A light chain and DNA
cencoding the region of human immunoglobulin kappa chain, and is
deposited as FERN BP-6274 (claimed). The invention provides
methods for producing humanised antibodies by culturing host
cells. Humanised versions of HFE7A (see AAM8301-37), like native
HFE7A, are capable of inducing apoptosis in abnormal cells
expressing Fas, and of inhibiting Fas-induced apoptosis in normal
colls. The humanised antibodies are used to evaluate, in animal
models, treatments of diseases that involve Fas/Fas ligand
interactions, and also to treat such diseases, including autcimmune
clistoper producing and cliptose syndrome, pernicious anaemia,
disease, rheumatoid arthritis, autcimmune haemolytic anaemia,
disease, rheumatoid arthritis, autcimmune haemolytic anaemia,
disease, rheumatoid arthritis, autcimmune haemolytic anaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 KASQSVDYDGDSYMNXXXXXXXXXXXXXXAASNLESXXXXXXXXXXXXXXXXXXXXX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This is the amino acid sequence of the PDHM type humanised light chain of murine anti-human Fas monoclonal antibody HFE7A.

CHain of murine anti-human Fas monoclonal antibody HFE7A.

CHAIN K49R and R107K amino acid substitutions; these residues are conserved in the human light (kappa) chain. Host cell Escherichia coli pHSHM2 SANK 70198 harbors plasmid pHSHM2 carrying a fusion of the humanised PDHM type HFE7A light chain and DNA encoding the region of human immunoglobulin kappa chain, and is deposited as FERM BP-6272 (claimed). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised versions of HFE7A (see AAW83031-37), like native KFE7A, are capable of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. The humanised antibodies are used to evaluate, in animal models, treatments of diseases that involve Fas,Fas ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Addison's disease, scleroderma, Goodpasture syndrome, Crohn's disease, rheumatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura and insulin-dependent diabetes), allergies, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antibodies and proteins bind conserved epitope of Fas antigen used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis, hepatitis and AIDS
